

Aura USB Mic™ Digital USB Microphone

AURA USB Mic™ DIGITAL USB MICROPHONE

Perfect Huddle room microphone! Set the mic on the table, plug into the USB port of your PC / Mac and your microphone is ready for Zoom, Teams, Google Meet, and other VoIP calls. Record audio for YouTube videos, or Podcasts too.

Why use an external microphone instead of your computer's? Well, everyone will be heard better, since the microphone can be ideally located between all the people in the room. Also, because USB mics process sound internally, they act as their own sound card when attached to a computer. So a USB mic will produce the same quality output regardless of the computer's built-in audio hardware.
